If a Knock-in Event occurs, the performance of the product is always given by the Coupons paid out during the term. If a Knock-in Event occurs and if the Final Fixing Value of the Underlying is below the Cap Level, the investor receives a cash repayment corresponding to the Denomination divided by the Cap Level and multiplied by the Final Fixing Value of the worst performing Underlying. Therefore, the investor may suffer a partial or total loss. The acquisition price is 100.00%\*\* of the Initial Fixing Value (Cap Level). This negative performance is reduced by the guaranteed Coupons paid out during the term. The table above is valid at maturity only and is by no means meant as a price indication for the present product throughout its lifetime. Additional risk factors may have a significant impact on the value of the product during the term. The price quoted on the secondary market can therefore deviate substantially from the above table. For this table it was assumed, that SMI Swiss Market Index Price Index was the worst performing Underlying. This selection is just a representative example of the possible alternatives. Currency risks between the Underlyings and the Product are not considered in the table.

### 3. Material Risks for Investors

#### Issuer Risk

Obligations under these products constitute direct, unconditional and unsecured obligations of the Issuer and rank pari passu with other direct, unconditional and unsecured obligations of the Issuer. The value of the product not only depends on the performance of the Underlying and other developments in the financial markets, but also on the solvency of the Issuer, which may change during the term of this product.

#### Specific product risks

Structured products are complex financial instruments, which entail considerable risks and, accordingly, are only suitable for investors who have the requisite knowledge and experience and understand thoroughly the risks connected with an investment in these structured products and are capable of bearing the economic risks. The loss potential of an investment in ZKB Barrier Reverse Convertible Worst of is limited to the difference between the purchase price and the cash redemption amount as defined in 'Redemption Method'. The Coupon, which is paid out in any case, reduces the loss of the product compared to a direct investment in the worst performing Underlying. The product is denominated in CHF. If the investor's reference currency differs from the CHF, the investor bears the risk between the CHF and his reference currency.
