The possibility of an early redemption has been neglected in the above table.

If at maturity all Underlyings trade higher or equal to the Cap Level, the performance of the structured product will be at the over the lifetime paid out Coupon (according to Coupon Payment Date(s)) of 6.38%. If at maturity one or more Underlyings trade below the Cap Level, the investor will receive physical delivery of the Underlying with the worst relative performance (between Initial Fixing Date and Final Fixing Date). Therefore, the investor may suffer a partial or total loss. The cost price of the delivered Underlyings is at 60% of the Initial Fixing Value. As a result, the negative performance of the structured product is lower than the negative performance of the worst performing Underlying.

The table above is valid at maturity only and is by no means meant as a price indication for this structured product throughout its lifetime. The price of this structured product depends on additional risk factors between the Initial Fixing Date and the Final Fixing Date. The price quoted on the secondary market can therefore deviate substantially from the above table. It was assumed, that Cie Fin Richemont rs was the worst performing Underlying. This selection is just a representative example of the possible alternatives.

3. Material Risks for Investors

Issuer Risk

Obligations under this structured product constitute direct, unconditional and unsecured obligations of the Issuer and rank pari passu with other direct, unconditional and unsecured obligations of the Issuer. The value of the structured product not only depends on the performance of the Underlying and other developments in the financial markets, but also on the solvency of the Issuer, which may change during the term of this structured product.

Specific Product Risks

Structured products are complex financial instruments, which entail considerable risks and, accordingly, are only suitable for investors who have the requisite knowledge and experience and understand thoroughly the risks connected with an investment in these structured products and are capable of bearing the economic risks. The loss potential of an investment in this structured product is, in case of delivery of an Underlying share at maturity, limited to the difference between the purchase price of the structured product and the value of the Underlying shares at maturity. The value of the worst performing Underlying share can then be lower than the Cap Level. The product is denominated in CHF. The investor bears the risk between the CHF and his reference currency.

4. Additional Terms

Specific modification rules for certain types of Underlyings stated in the base prospectus shall prevail. If the Issuer determines, for whatever reason, that an adequate modification is not possible, the Issuer has the right to redeem the products early.
