The possibility of an early redemption has been neglected in the above table.

If the Knock-in Level is never touched between the Initial Fixing Date and Final Fixing Date, the performance of the ZKB Callable Barrier Reverse Convertible on worst of will equal the Coupon of 17.70%, cf. table under "Knock-in Level untouched", paid out during the term of the structured product according to Coupon Payment Dates.

If, however, the Knock-in Level is touched between the Initial Fixing Date and the Final Fixing Date, cf. Table under "Knock-in Level touched", the redemption of the ZKB Callable Barrier Reverse Convertible on worst of will correspond to the Denomination minus the percentage performance between the Closing Level on Initial Fixing Date and the Closing Level on Final Fixing Date of the worst performing Underlying less the Coupon(s) of 17.70% paid out during the term of the structured product. Therefore, the investor may suffer a partial or total loss. If the Final Fixing Levels of all Underlyings trade at or above the Initial Fixing Level, redemption will be 100% of Denomination.

Additionally, the Coupon(s) will be paid out according to Coupon Payment Dates.

The table above is valid at maturity only and is by no means meant as a price indication for this structured product throughout its lifetime. The price of this structured product depends on additional risk factors between the Initial Fixing Date and the Final Fixing Date. The price quoted on the secondary market can therefore deviate substantially from the above table. It was assumed, that Royal Caribbean s was the worst performing Underlying. This selection is just a representative example of the possible alternatives.
