## Key Elements of the Product

ZKB Callable Barrier Reverse Convertible is an investment product, which can be redeemed early on different dates at the discretion of the Issuer. The investor achieves an above average return in case of stable, slightly raising or even falling levels of the Underlying. If the Underlying has ever touched or breached the Knock-in Level between Initial Fixing Date and Final Fixing Date, redemption will be 100 % of the Denomination, independent of the price of the Underlying at Final Fixing Date. If, between Initial Fixing Date and Final Fixing Date, the Knock-in Level of the Underlying has been touched or breached and on the Final Fixing Date, the Final Fixing Level of the Underlying is below the Initial Fixing Level, the investor will receive a physical delivery of the Underlying according to the Redemption Method. If a knock-in event has occurred but the Final Fixing Level of the Underlying is at or above its Initial Fixing Level, redemption will be 100% of the Denomination. The guaranteed Coupon will be paid out in any case. Because of the guaranteed Coupon the purchase price is clearly below the price of the Underlying at Initial Fixing Date.

## Taxes

The product is considered as Non-IUP (Intérêt Unique Prédominant). The coupon payments of 1.5000% (6.0000% p.a.)\*\* are divided in an option premium payment of 6.0000% p.a.\*\* and an interest payment of 0.0000% p.a. \*\* The option premium part qualifies as capital gain and is not subject to Swiss income tax for private investors with Swiss tax domicile. The interest part is subject to Swiss income tax at the time of payment. The product is not subject to Swiss withholding tax. The Federal securities transfer stamp tax is levied on secondary market transactions of this product. The Federal securities transfer stamp tax will be charged in the case of physical delivery of the underlying securities at maturity. This product may be subject to additional withholding taxes or duties, such as related to FATCA, Sect. 871(m) U.S. Tax Code or foreign financial transaction taxes. Any payments due under this product are net of such taxes or duties.

The possibility of an early redemption has been neglected in the above table.

If the Knock-in Level is never touched between Initial Fixing Date and Final Fixing Date, the performance of the ZKB Callable Barrier Reverse Convertible will equal the Coupon of 9.0000%\*\*\*, cf. table under "Knock-in Level untouched", paid out during the term of the structured product according to Coupon Payment Dates.

If, however, the Knock-in Level is touched between Initial Fixing Date and Final Fixing Date, cf. Table under "Knock-in Level touched", the loss of the ZKB Callable Barrier Reverse Convertible at maturity corresponds to the loss of the Underlying less the Coupon(s) of 9.0000%\*\* paid out during the term of the structured product, i.e. a partial or total loss. If the Final Fixing Level of the Underlying trades at or above the Initial Fixing Level, redemption will be 100% of Denomination.

Additionally, the Coupon(s) will be paid out according to Coupon Payment Dates.

The table above is valid at maturity only and is by no means meant as a price indication for this structured product throughout its lifetime. The price of this structured product depends on additional risk factors between Initial Fixing Date and Final Fixing Date. The price quoted on the secondary market can therefore deviate substantially from the above table.
