Current Financing Level

At the end of each adjustment day, the Financing Level is adjusted by offsetting the interest and debiting any investment income of the Underlying. The Current Financing Level is determined by the Calculation Agent using the following formula:

$$FL_E = FL_A + \left((r + FS) \cdot FL_A \cdot \frac{n}{360} \right) - SF \cdot DIV$$

where

FL_A: Financing Level before adjustment

FL_E: Financing Level after adjustment

FS: Current Financing Spread

r: Money Market Interest Rate

n: Number of calendar days between the Current Adjustment Day (exclusive) and the next Adjustment Day (inclusive)

SF: Tax factor for any investment income such as dividends. The tax factor is in the range between zero and one and is determined by the calculation agent.

DIV: Dividends and other investment income of the Underlying since the last adjustment

The result of the calculation is rounded down to the nearest multiple according to the rounding of the Financing Level.

where

FL: Current Financing Level
