The possibility of an early redemption has been neglected in the above table.

If the Final Fixing Level of all Underlyings trades above the Knock-in Level, the redemption equals 100.00% of Denomination (CHF 1'000). In these cases, the performance of the product corresponds to the sum of the guaranteed Coupons paid out during the lifetime: 14.4372%.

If the Final Fixing Level of at least one Underlying trades at or below the Knock-in Level, the performance equals the percentual difference between the Initial Fixing Level and the Final Fixing Value of the worst performing Underlying, i.e. a partial or total loss. This negative performance is reduced by the guaranteed Coupons paid out during the lifetime of the product. The Coupon Payment occurs independently of the level of the Underlyings on the respective Coupon Observation Date.

The table above is valid at maturity only and is by no means meant as a price indication for these structured products throughout its lifetime. The price of these structured products depends on additional risk factors between the Initial Fixing Date and the Final Fixing Date. The price quoted on the secondary market can therefore deviate substantially from the above table. It was assumed, that CS Group rs was the worst performing Underlying. This selection is purely exemplary.
