2023	2.9%
2024	20.2%
2025	10.1%

Description

The certificate invests in securities of companies domiciled or doing business predominantly in Japan. Companies are selected on the basis of sustainability criteria and a quantitative model. For diversification purposes, normally between 60 and 90 positions are held.

Creating Added Value Through Sustainable Companies

Investing in sustainable companies not only promotes sustainable growth in Japan but also allocates funds to companies that can benefit more from long-term trends or are less affected by new regulations. Among the big players in an industry, these are the companies that distinguish themselves from their peers through a low environmental impact, social commitment and responsible corporate management. A commodities company, for example, can use more efficient manufacturing methods to counteract an increase in raw material prices and reduce costs. A food manufacturer can use healthy products to help fight obesity and at the same time benefit from the sharp rise in demand. And more sustainable banks, which focus on responsible corporate management, have proven to be more crisis-resistant. Smaller companies that develop new technologies e.g. for renewable energies, a more efficient use of resources or for public transport are benefiting from the respective trends.

A Combination of Sustainability, Value, Momentum and Quality

Based on the proprietary sustainable universe (sustainable approach), the tried and tested quantitative model of Zürcher Kantonalbank invests in stocks that best embody the three characteristics value, momentum and quality. The focus is on stocks with a low valuation (Value), an extraordinary profit and price performance (Momentum), low risk ratios as well as a healthy balance sheet and income statement (Quality). The certificate uses the MSCI Japan as its benchmark index.

Classification by sector

In addition to stocks from the MSCI Japan Index, the Sustainability Universe also consists of other sustainable companies from Japan that meet certain minimum requirements in terms of market capitalisation and trading volume. The starting point for stock selection is the classification of all Japanese stocks categorized as sustainable. This is done by sector.
