- If at least one Underlying closes below the Call Level on the Observation Date, the product continues.

**Redemption at maturity**

If no Early Redemption event has occurred, the following redemption scenarios are possible:

- If the Final Fixing Value of all Underlyings is at or above the Cap Level, the Redemption amounts to 100% of Denomination.
- If the Final Fixing Value of one or more Underlyings is below the Cap Level, the investor receives a physical delivery of the worst performing Underlying (between Initial Fixing Date and Final Fixing Date). The number of Underlyings per Denomination is defined in Ratio (fractions will be paid in cash, no cumulation).

The Coupons are paid out on the respective Coupon Date independent of the performance of the Underlyings.

## Key elements of the product

The ZKB Autocallable Reverse Convertible on worst of is an investment product, which can be redeemed early quarterly - depending on the performance of the Underlyings. The product regularly pays out attractive Coupons during the term. This product is a combined investment instrument that essentially consists of a fixed income security and the sale of a "out-of-the-money" put option. This allows the investor to benefit from the current volatility of the Underlyings. An above-average return is achieved when prices fall slightly, stagnate or rise slightly. If the Final Fixing Value of all Underlyings is at or above the Cap Level, the investor receives a cash redemption in the amount of the Denomination. If the Final Fixing Value of at least one Underlying is below the Cap Level, the investor will receive a physical delivery of a number of Underlyings as defined under "Redemption method" of the Underlying with the worst performance between Initial Fixing Date and Final Fixing Date.

## Taxes

The product is considered as transparent and has no predominant one-off interest (Non-IUP). The Coupon of 1.9527% (7.8109% p.a.) is divided into a premium payment of 1.9527% (7.8109% p.a.) and an interest payment of 0.00% (0.00% p.a.). The option premium part qualifies as capital gain and is not subject to Swiss income tax for private investors with Swiss tax domicile. The interest payment is subject to income tax at the time of payment. The Swiss withholding tax is levied. In the case of physical delivery of the Underlying at maturity, the federal securities transfer stamp is levied on the basis of the Cap level. The Federal securities transfer stamp tax is levied on secondary market transactions. The product may be subject to further withholding taxes or duties, in particular under the rules of FATCA or Sect. 871(m) U.S. Tax Code or foreign financial transaction taxes. All payments from this product are made after deduction of any withholding taxes and levies. The information above is a summary only of the Issuer's understanding of current law and practice in Switzerland relating to the taxation of these products. The relevant tax law and practice may change. The Issuer does not assume any liability in connection with the above information. The tax information only provides a general overview and can not substitute the personal tax advice to the investor.

In case of discrepancies between information or the provisions in these Final Terms and those in the Base prospectus or the Relevant Conditions, the information and provisions in these Final Terms shall prevail. ## 2. Profit and Loss Expectations

### Profit and Loss Expectations at Maturity

Worst Underlying		Redemption		
Price	Percent	Product	Coupon	Performance in %
CHF 29.10	-30.00%	CHF 958.90	CHF 156.22	11.512%
CHF 33.26	-20.00%	CHF 1'000.00	CHF 156.22	15.6216%
CHF 37.41	-10.00%	CHF 1'000.00	CHF 156.22	15.6216%
CHF 41.57	0.00%	CHF 1'000.00	CHF 156.22	15.6216%
CHF 45.73	10.00%	CHF 1'000.00	CHF 156.22	15.6216%
CHF 49.88	20.00%	CHF 1'000.00	CHF 156.22	15.6216%
CHF 54.04	30.00%	CHF 1'000.00	CHF 156.22	15.6216%

The redemption scenario above neglects early redemption.

If the Final Fixing Value of all Underlyings is at or above the Cap Level, the performance of the product is always given by the Coupons paid out during the term (acc. "Coupon Dates"), in this case 15.6216%. However, if the Final Fixing Value of at least one Underlying is below the Cap Level, the investor will receive a physical delivery of a number of Underlyings as defined in Ratio. Therefore, the investor may suffer a partial or total loss. The acquisition price of the delivered Underlyings is 73.00% of the Initial Fixing Value, which means that the performance of the product is less negative than the performance of the Underlying. This negative performance is reduced by the guaranteed Coupons paid out during the term.

The table above is valid at maturity only and is by no means meant as a price indication for the present product throughout its lifetime. Additional risk factors may have a significant impact on the value of the product during the term. The price quoted on the secondary market can therefore deviate substantially from the above table. For this table it was assumed, that Adecco Group AG rs was the worst performing Underlying. This selection is just a representative example of the possible alternatives. Currency risks between the Underlying and the product are not considered in the table.

## 3. Material Risks for Investors

### Issuer Risk

Obligations under these structured products constitute direct, unconditional and unsecured obligations of the Issuer and rank pari passu with other direct, unconditional and unsecured obligations of the Issuer. The value of the structured product not only depends on the performance of the Underlying and other developments in the financial markets, but also on the solvency of the Issuer, which may change during the term of this structured product.

### Specific product risks

Structured products are complex financial instruments, which entail considerable risks and, accordingly, are only suitable for investors who have the requisite knowledge and experience and understand thoroughly the risks connected with an investment in these structured products and are capable of bearing the economic risks. The loss potential of an investment in ZKB Autocallable Reverse Convertibles on worst of in the case of a title delivery is limited to the difference between the purchase price of the product and the cumulative value of the number of Underlyings as defined in 'Redemption Method'. The Coupon, which is paid out in any case, reduces the loss of the product compared to a direct investment in the worst performing Underlying. The price of the Underlyings may be significantly below the Cap Level at redemption.

The product is denominated in CHF. If the investor's reference currency differs from the CHF, the investor bears the risk between the CHF and his reference currency.

## 4. Additional Terms

### Modifications

If an extraordinary event as described in the base prospectus occurs in relation to an Underlying or if any other extraordinary event occurs, which makes it impossible or particularly cumbersome for the Issuer, to fulfill its obligations under the products or to calculate the value of the products, the Issuer shall at its own discretion take all the necessary actions and, if necessary may modify the terms and conditions of these products at its own discretion in such way, that the economic value of the products after occurrence of the extraordinary event corresponds, to the extent possible, to the economic value of the products prior to the occurrence of the extraordinary event. Specific modification rules for certain types of Underlyings stated in the base prospectus shall prevail. If the Issuer determines, for whatever reason, that an adequate modification is not possible, the Issuer has the right to redeem the products early.
