If at maturity the Underlying trades at or above the Cap Level, the performance of the ZKB Discount Certificate is at 13.80%. If at maturity the Underlying trades below the Cap Level, the performance of the ZKB Discount Certificate equals the lower value of the Underlying divided by the lower purchase price - a result from the discount. Therefore, the investor may suffer a partial or total loss. Due to the discount, the ZKB Discount Certificate decreases in value at a slower pace than the Underlying.

The table above is valid at maturity only and is by no means meant as a price indication for this structured product throughout its lifetime. The price of this structured product depends on additional risk factors between Initial Fixing Date and Final Fixing Date. The price quoted on the secondary market can therefore deviate substantially from the above table.

## 3. Material Risks for Investors

| Credit Risk Relating to Issuer          | Obligations under these structured products constitute direct, unconditional and unsecured obligations of the Issuer and rank pari passu with other direct, unconditional and unsecured obligations of the Issuer. The value of the structured product does not only depend on the performance of the Underlying and other developments in the financial markets, but also on the solvency of the Issuer, which may change during the term of this structured product.  |
|---|---|
| Specific Product Risks                  | Structured products are complex financial instruments, which entail considerable risks and, accordingly, are only suitable for investors who have the requisite knowlegde and experience and understand thoroughly the risks connected with an investment in these Structured products and are capable of baring the economic risks. Specific modification rules for certain types of Underlyings stated in the base prospectus shall prevail. If the Issuer determines, for whatever reason, that an adequate modification is not possible, the Issuer has the right to redeem the products early. |
