Investment Profile

A change in the investment regime, from a more deflationary to an inflationary environment, is just manifesting itself in 2021. The outcome will ultimately depend on how the G7 central banks react if it turns out that they underestimated the inflationary pressures emanating from the pandemic and the subsequent strong economic recovery. After a prolonged period of low inflation, consumer price indices currently stand at 5% in the U.S. and almost 2% in Europe (as of May 2021). While certain market participants are convinced that these rates will level off as the economic cycle normalizes, there are also signs that supply-side shortages in the economy (raw materials, labor, etc.) in particular could last longer. Our Global Reflation Basket aims to benefit from these inflationary pressures and focuses on companies with strong pricing power or stocks that tend to benefit from inflation. Equities are often relative winners in an inflationary environment compared to other asset classes, as the ability to adjust to inflation is usually present in quality companies.

Food retailers as well as consumer stocks with strong brands may suffer from unexpected cost inflation in an initial phase, but can quickly adjust their prices. We also see potential in industrial and IT companies that have strong market positions due to high market shares and margin leadership, which lead to relatively high pricing power. Commodity stocks benefit from significantly increased demand for raw materials and price increases in an economic upswing. Financial stocks could also benefit from rising key interest rates due to increased inflation. Very selectively chosen utility stocks benefit in a reflation scenario from inflation-linked yields and cheaper buybacks of outstanding bonds due to rising interest rates.
