The possibility of an early redemption has been neglected in the above table.

The Coupons paid during the lifetime of the product will not be considered in the above performance table at maturity. The table above only shows the last Coupon Payment (acc. "Coupon Payment").

If the Final Fixing Level of all Underlyings trades above the Knock-in Level, the redemption equals 100.00% of Denomination (EUR 1'000). In these cases, the performance of the product corresponds to the sum of the contingent Coupons paid out during the lifetime. If the Final Fixing Level of at least one Underlying trades at or below the Knock-in Level, the performance equals the percentual difference between the Initial Fixing Level and the Final Fixing Value of the worst performing Underlying. This negative performance is reduced by the contingent Coupons paid out during the lifetime of the product. The Coupon Payment occurs dependently of the level of the Underlyings on the respective Coupon Observation Date.

The table above is valid at maturity only and is by no means meant as a price indication for these structured products throughout its lifetime. The price of these structured products depends on additional risk factors between the Initial Fixing Date and the Final Fixing Date. The price quoted on the secondary market can therefore deviate substantially from the above table. It was assumed, that the SMI[®] Index was the worst performing Underlying. This selection is purely exemplary. The calculation of the Redemption is independent of any changes in foreign exchange rates between EUR and the currency of the Underlying (Quanto Style).

3. Material Risks for Investors

Issuer Risk

Obligations under this structured product constitute direct, unconditional and unsecured obligations of the Issuer and rank pari passu with other direct, unconditional and unsecured obligations of the Issuer. The value of the structured product not only depends on the performance of the Underlying and other developments in the financial markets, but also on the solvency of the Issuer, which may change during the term of this structured product.

Specific Product Risks

Structured products are complex financial instruments, which entail considerable risks and, accordingly, are only suitable for investors who have the requisite knowledge and experience and understand thoroughly the risks connected with an investment in these structured products and are capable of bearing the economic risks. The loss potential of this structured product is in case of a Knock-in Event equal to the one of the Underlying with the worst Performance. The price of the Underlying can trade at redemption considerably below the Initial Fixing Level. The product is denominated in EUR. If the investor's reference currency differs from the EUR, the investor bears the risk between the EUR and his reference currency.

Specific modification rules for certain types of Underlyings stated in the base prospectus shall prevail. If the Issuer determines, for whatever reason, that an adequate modification is not possible, the Issuer has the right to redeem the products early.</p>

Market Disruptions	<p>Compare specific provisions in the base prospectus.</p>
Prudential Supervision	<p>As a bank within the meaning of the Swiss Federal Act on Banks and Savings Banks (BankG; SR 952.0) and a securities firm within the meaning of the Swiss Federal Act on Financial Institutions (FinIAG; SR 954.1), Zürcher Kantonalbank is subject to the prudential supervision of FINMA, Laupenstrasse 27, CH-3003 Bern, https://www.finma.ch.</p>
