Redemption Method

Early Redemption:

On each Observation Date, the Issuer has the right, but not the obligation to call the product and to redeem it on the respective Early Redemption Date. Information flow about redemption is stated in section "Notices" and will immediately take effect on the Observation Date.

- If the Issuer exercises its one-sided early redemption right, the product will be redeemed at 100% of the Denomination plus Coupon Payment for the respective period. No further payments are made.
- If the Issuer does not exercise its one-sided early redemption right, the product continues to run until the next Observation Date.

Redemption at Maturity:

If no Early Redemption event has occurred, there are the following possible redemption scenarios:

If the price of none of the Underlyings has traded at or below the Knock-in Level at the Final Fixing Date, redemption will be 100% of the Denomination.

If the price of one or more of the Underlyings has traded at or below the Knock-in Level at the Final Fixing Date ("Knock-in Event"), the investor will receive a delivery of the ETF (Exchange Traded Fund) corresponding to the Underlying with the worst relative performance (between Initial Fixing Date and Final Fixing Date) (cash settlement of fractions, no cumulation).

If the delivery of the ETF is economically or actually impossible, the Issuer reserves the right to deliver a similar ETF or, if necessary, to make a Redemption of the Denomination minus the percentage difference between the Initial Fixing Value and the Final Fixing Value of the Underlying with the largest negative performance instead of physical delivery.

The number of ETFs to be delivered per Denomination is calculated as follows:

$$N = \frac{\text{Denomination}}{\text{Index IF}} \times \frac{\text{Index FF}}{\text{ETF FF}} \times \text{FX}$$

whereby:

Index IF: Initial Fixing Value of the Underlying with the worst performance

Index FF: Final Fixing Value of the Underlying with the worst performance

ETF FF: closing price on the Final Fixing Date of the ETF corresponding to the Underlying with the worst performance

FX: Interesting exchange rate achieved on the Final Fixing Date, 17:00 CEST, which is used for the conversion of the currency of the Underlying asset with the worst performance into the reference currency of the ETF.

The Coupon will be paid out on the redemption date independent of the performance of the Underlying.

The calculation of the Redemption is independent of any changes in foreign exchange rates between CHF and the currency of the Underlying (Quanto Style).

If the prices of the Underlyings do not close at or below the Knock-in Level on the Final Fixing Date, the performance of the ZKB Callable Barrier Reverse Convertible Last Look on worst of will be equal the Coupon of 6.25%** paid out during the term or the structured product according to Coupon Payment Dates.

The price quoted on the secondary market can therefore deviate substantially from the above table. It was assumed, that the SMI® Index was the worst performing Underlying. This selection is just a representative example of the possible alternatives.
