

Structured Products are not collective investment schemes within the meaning of the Swiss Federal Act on Collective Investment Schemes (CISA) and are not subject to an authorisation or supervision by the Swiss Financial Market Supervisory Authority FINMA. Investors bear the issuer risk.

ZKB Tracker Certificate on a AI-supported Swiss Equity Basket

March 2025

Investing with Artificial Intelligence

Imagine a tireless assistant that analyses huge amounts of data around the clock, predicts market trends and suggests tailored investment strategies. This is exactly what artificial intelligence (AI) can do for asset management. In a world increasingly dominated by technology and data, AI offers efficient and powerful tools for making informed investment decisions and optimising portfolios. The Tracker Certificate of Zürcher Kantonalbank exploits this potential to optimise the performance of the underlying Swiss equity portfolio.

In a nutshell

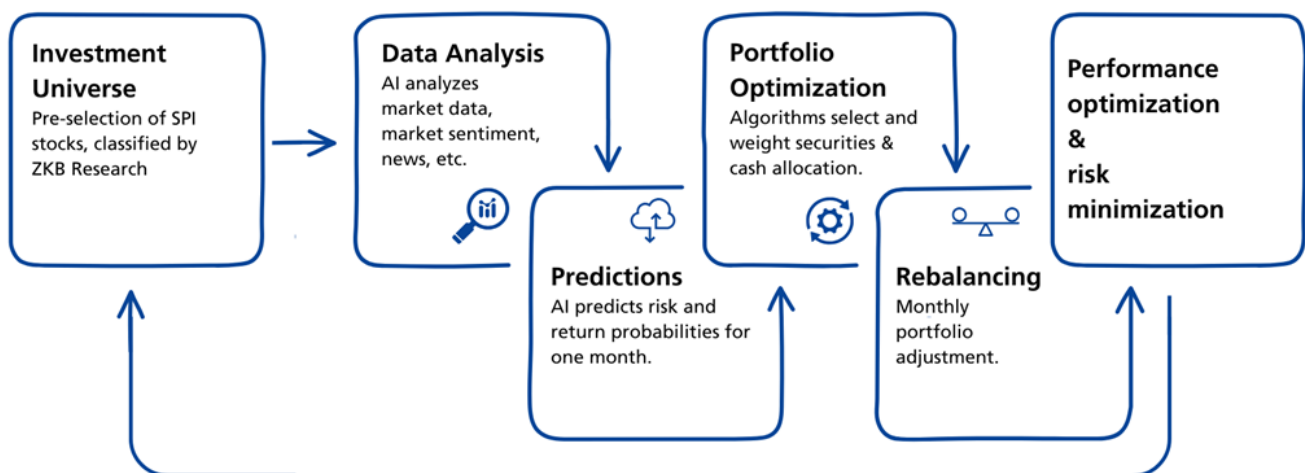

- AI-optimised Swiss Equity Basket
- Investment universe consists of SPI stocks which are rated "Outperform" or "Market Perform" by ZKB's research department
- Monthly rebalancing
- Issue price CHF 100.00
- Open end

Investment strategy

The investment universe of the ZKB Tracker Certificate consists of all equities included in the Swiss Performance Index (SPI) and rated "Outperform" or "Market Perform" by the research department of Zürcher Kantonalbank. On the basis of this list, Aisot Technologies determines the optimal allocation to each stock on a monthly basis. Aisot uses a proprietary AI model that calculates the return potential of each stock and identifies portfolio and stock-specific risk factors.

To make its forecasts, the AI analyses a wide range of data sources, including company figures, market sentiment, macro indicators and news from a variety of sources. The aim is to optimise portfolio performance and minimise potential risk. Depending on the market situation, the AI may use cash to create an optimal portfolio, with the cash component not exceeding 50% of the basket value. It must also take into account other constraints such as rebalancing volume, tradability and maximum individual security weightings.

Overview of the investment process
