Key Elements of the product

ZKB Callable Barrier Reverse Convertible on worst of is an investment product, which can be redeemed early on different dates at the discretion of the Issuer. The investor achieves an above average return in case of stable, slightly raising or even falling levels of the Underlyings.

If no Underlying has ever touched or breached the Knock-in Level between Initial Fixing Date and Final Fixing Date, redemption will be 100 % of the Denomination, independent of the price of the Underlyings at Final Fixing Date. If, between Initial Fixing Date and Final Fixing Date, the Knock-in Level of one or more of the Underlyings has been touched or breached and on the Final Fixing Date, the Final Fixing Level of one or more Underlyings is below the Initial Fixing Level, the investor will receive a physical delivery of the worst performing Underlying (between Initial Fixing Date and Final Fixing Date) according to the Redemption Method. If a knock-in event has occurred but the Final Fixing Levels of all Underlyings are at or above their respective Initial Fixing Level, redemption will be 100 % of the Denomination. The guaranteed Coupon will be paid out in any case. Because of the guaranteed Coupon the purchase price is clearly below the price of the Underlyings at Initial Fixing Date.

The possibility of an early redemption has been neglected in the above table.

If the Knock-in Level is never touched between the Initial Fixing Date and Final Fixing Date, the performance of the ZKB Callable Barrier Reverse Convertible on worst of will equal the Coupon of 15.2600%, cf. table under "Knock-in Level untouched", paid out during the term of the Structured Product according to Coupon Payment Dates.

If, however, the Knock-in Level is touched between the Initial Fixing Date and the Final Fixing Date, cf. Table under "Knock-in Level touched", the loss of the ZKB Callable Barrier Reverse Convertible on worst of at maturity corresponds to the loss of the Underlying with the worst relative performance between Initial Fixing Date and Final Fixing Date less the Coupon(s) of 15.2600% paid out during the term of the structured product, i.e. a partial or total loss. If the Final Fixing Levels of all Underlyings trade at or above the Initial Fixing Level, redemption will be 100% of Denomination.

Additionally, the Coupon(s) will be paid out according to Coupon Payment Dates.

The table above is valid at maturity only and is by no means meant as a price indication for this structured product throughout its lifetime. The price of this structured product depends on additional risk factors between the Initial Fixing Date and the Final Fixing Date. The price quoted on the secondary market can therefore deviate substantially from the above table. It was assumed, that Zurich Insurance rs was the worst performing Underlying. This selection is just a representative example of the possible alternatives.
