### 3. Material Risks for Investors

#### Issuer Risk

Obligations under these structured products constitute direct, unconditional and unsecured obligations of the Issuer and rank pari passu with other direct, unconditional and unsecured obligations of the Issuer. The value of the structured product does not only depend on the performance of the Underlying and other developments in the financial markets, but also on the solvency of the Issuer, which may change during the term of this structured product.

#### Specific Product Risks

Structured products are complex financial instruments, which entail considerable risks and, accordingly, are only suitable for investors who have the requisite knowledge and experience and understand thoroughly the risks connected with an investment in these structured products and are capable of bearing the economic risks.

Tracker Certificate is an investment product whose price fluctuates to the same degree as the Underlying. Depending on price trends, the price of a Tracker Certificate could fall below the Issue Price. The risk profile of the Tracker Certificate corresponds to that of the Underlying. The Tracker Certificate is denominated in CHF. The investor bears all the risks in connection with a possible exchange rate risk between the product currency, the currency of the components of the Underlying, and his reference currency.

Investments with regard to Emerging Markets are exposed to several risk factors especially political or economic risks. The political system, the continuity and the political culture of emerging markets might be totally different compared to developed countries and might therefore cause a negative influence on the Underlying and/or the currencies. The relevant Underlyings and currencies are generally not as liquid as those of developed countries. Purchase and sales might cause market fluctuations. Especially in emerging markets currency transfer restrictions and/or a connectivity to a reference currency are more likely.
