2023	1.4%
2024	16.0%
2025 YTD	10.4%

Emerging Markets: Tomorrow's Growth Engine
Emerging Markets have become increasingly important in terms of their contribution to global GDP as well as their market capitalization. Longterm forecasts predict that by 2050, the combined GDP of the seven largest Emerging Markets (E7) will be twice as high as that of the G7 industrialized countries. The financial crisis has boosted this transformation process even further. The balance will probably continue to shift in favor of the Emerging Markets in view of the unsolved debt crisis in the eurozone and the highly unstable financial situation in the U.S.

Growing Environmental and Social Risks
Unfortunately, the high growth expectations are coupled with increasing environmental and social risks. The fast-paced growth in Emerging Markets is closing the gap between rich and poor countries, thus raising prosperity globally. Yet, at the same time the negative aspects of this development are becoming increasingly obvious as the surge in consumption of resources accelerates and the output of greenhouse gases rises, further accelerating the climate change. Moreover, population growth in Emerging Markets is likely to remain high, partly due to lack of adequate social welfare systems (world population is expected to reach 9 billion by the year 2050).

Creating Added Value Through Sustainable Companies
In order to encounter the problematic effects described above, it is vital that especially companies in Emerging Markets actively strive to uncouple their resource consumption from their economic growth, for instance through more efficient and sustainable production processes. This will gain them an additional competitive edge. In a first step, the ZKB Sustainability Research Team examines the sustainability of all companies qualifying for ZKB MeinIndex Sustainability Emerging Markets. The Team applies a multi-level monitoring procedure encompassing comprehensive and rigorous exclusion criteria as well as quantitative and qualitative environmental, social, and governance criteria. In addition, the respective companies must fulfill one of the following three criteria: inclusion in the MSCI EMMA (ex energy, ex mining), Emerging Markets companies not included in the MSCI EMMA, or companies with a predominant share of sales in Emerging Markets.

ZKB MeinIndex Sustainability Emerging Markets

In a second step, companies from ZKB's sustainable investment universe are chosen for the ZKB MeinIndex Sustainability Emerging Markets based on their attractiveness as determined by the quantitative ZKB equity selection model.

Allocation to Homogeneous Country Groups

Starting point for the equity selection is the allocation of all Emerging Market shares that are considered sustainable to homogeneous country groups:

- Europe
- Africa
- Brazil
- Latin America ex Brazil
- China
- India
- Asia ex China and ex India

The idea behind this allocation is to compare equities with similar risk/return characteristics. For instance, the markets of Europe (including the heavyweight Russia), Africa (with South Africa) and Brazil export energy and materials and are thus strongly driven by the development of commodity markets. In contrast, the exporting countries in the rest of Asia, including the high-tech countries Korea and Taiwan, are primarily subject to general global economic development. China and India, in turn, are large and broadly diversified economies whose structures resemble those of industrialized countries more closely. In addition to those distinguished characteristics, the individual Emerging Markets strongly differ in terms of their stages of development. ZKB MeinIndex Sustainability Emerging Markets attempts to take these structural differences into account through its country allocation.

Quantitative Approach to Equity Selection
After the allocation to homogeneous groups of countries, the attractiveness of individual equities is determined by means of a quantitative model. The use of a quant model enables to systematically manage the large, heterogeneous and broadly diversified universe of Emerging Markets despite all structural differences.
