Key Elements of the product

ZKB Barrier Discount Certificates on worst of are investment products which combine the purchase of an Underlying with an option strategy. Thereby investors in ZKB Barrier Discount Certificate on worst of benefit from the current implied volatility of the Underlyings. The investor achieves an above average return in case of stable, slightly raising or even falling levels of the Underlyings. If the Knock-in Level has never been touched or breached between Initial Fixing Date and Final Fixing Date, redemption will be 100% of Denomination, independent of the Final Fixing Levels of the Underlyings. If the Knock-in Level has been touched or breached between Initial Fixing Date and Final Fixing Date, and if one or more of the Underlyings close below the Cap Level, the investor will receive a physical delivery of the worst performing Underlying (between Initial Fixing Date and Final Fixing Date) according to Redemption Method. If, however, the Final Fixing Levels of all Underlyings are at or above the Cap Level, redemption will be 100% of Denomination. Because of the Discount, the potential loss following a breach of the Knock-in Level is lower than the loss incurred with a direct investment in the Underlying.

Taxes

Any return on the product qualifies as capital gain and is generally not subject to Swiss income tax for private investors with Swiss tax domicile. The product is not subject to Swiss withholding tax. The Federal securities transfer stamp tax is not levied on secondary market transactions for ZKB Barrier Discount Certificates on worst of with initial duration of less than one year. The Federal securities transfer stamp tax will be charged in the case of physical delivery of the Underlying at maturity.

If at maturity the Knock-in Level has never been touched, the performance of the ZKB Barrier Discount Certificate on worst of is at 11.30%, see column "Knock-in Level untouched". If at maturity the Knock-in Level has been touched, see column "Knock-in Level touched", the performance of the ZKB Barrier Discount Certificate on worst of equals the performance of the worst performing Underlying from which the Discount has to be deducted. Therefore, the investor may suffer a partial or total loss. Due to the Discount, the ZKB Barrier Discount Certificate on worst of decreases in value at a slower pace than the Underlying. If all Underlyings trade at or above the Initial Fixing Level, the Denomination will be paid out.

The table above is valid at maturity only and is by no means meant as a price indication for this structured product throughout its lifetime. The price of this structured product depends on additional risk factors between the Initial Fixing Date and the Final Fixing Date. The price quoted on the secondary market can therefore deviate substantially from the above table. It was assumed, that Nestlé rs was the worst performing Underlying. This selection is just a representative example of the possible alternatives.

3. Material Risks for Investors

Credit Risk Relating to Issuer

Obligations under these structured products constitute direct, unconditional and unsecured obligations of the Issuer and rank pari passu with other direct, unconditional and unsecured obligations of the Issuer. The value of the structured product does not only depend on the performance of the Underlying and other developments in the financial markets, but also on the solvency of the Issuer, which may change during the term of this structured product.

Specific Product Risks

Structured products are complex financial instruments, which entail considerable risks and, accordingly, are only suitable for investors who have the requisite knowledge and experience and understand thoroughly the risks connected with an investment in these structured products and are capable of bearing the economic risks. The loss potential of an investment in ZKB Barrier Discount Certificate on worst of is limited to the difference between the purchase price of the ZKB Barrier Discount Certificate on worst of and Final Fixing Value of the worst performing Underlying multiplied by the Ratio. The Discount reduces the loss of the ZKB Barrier Discount Certificate on worst of compared to a direct investment in the Underlying with the worst relative performance. The value of the Underlying can then be lower than the Cap Level. The ZKB Barrier Discount Certificate on worst of is denominated in CHF. If the investor's reference currency differs from the CHF, the investor bears the risk between the CHF and his reference currency.

4. Additional Terms

Specific modification rules for certain types of Underlyings stated in the base prospectus shall prevail. If the Issuer determines, for whatever reason, that an adequate modification is not possible, the Issuer has the right to redeem the products early.

Market Disruptions

Compare specific provisions in the base prospectus.
