Redemption Method

Early Redemption:

In addition to the yearly early redemption right, the Issuer has on each Observation Date the right, but not the obligation to call the product and to redeem it on the respective Early Redemption Date. Information flow about redemption is stated in section "Notices" and will immediately take effect on the Observation Date.

- If the Issuer exercises its one-sided yearly early redemption right, the product will be redeemed at market price of the Structured Product (for the first time possible 22 December 2019 (modified following)).
- If the Issuer exercises its one-sided early redemption right, the product will be redeemed at 100% of the Denomination plus Coupon Payment for the respective period. No further payments are made.
- If the Issuer does not exercise its one-sided early redemption right, the product continues to run until the next Observation Date.

Redemption at maturity:

If no Early Redemption event has occurred, there are the following possible redemption scenarios:

If the price of none of the Underlyings has traded at or below the Knock-in Level between the Initial Fixing Date and the Final Fixing Date, redemption will be 100% of the Denomination independent of the closing price of the Underlyings on the Final Fixing Date.

If the price of one or more of the Underlyings has traded at or below the Knock-in Level between the Initial Fixing Date and the Final Fixing Date,

- redemption will be 100% of the Denomination if all Underlyings close at or higher than the Initial Fixing Level on the Final Fixing Date or
- the investor will receive a cash repayment corresponding to the Denomination minus the percentage difference between Initial Fixing Level and Final Fixing Level of the Underlying with the largest negative performance.

The Coupon will be paid out on the redemption date independent of the performance of the Underlyings.

The calculation of the Redemption is independent of any changes in foreign exchange rates between CHF and the currency of the Underlyings (Quanto Style).

The possibility of an early redemption has been neglected in the above table.

If the Knock-in Level is never touched between the Initial Fixing Date and Final Fixing Date, the performance of the ZKB Callable Barrier Reverse Convertible on worst of will equal the Coupon of 9.7500%^{**}, cf. table under "Knock-in Level untouched", paid out during the term of the Structured Product according to Coupon Payment Dates.

If, however, the Knock-in Level is touched between the Initial Fixing Date and the Final Fixing Date, cf. Table under "Knock-in Level touched", the loss of the ZKB Callable Barrier Reverse Convertible on worst of at maturity corresponds to the loss of the Underlying with the worst relative performance between Initial Fixing Date and Final Fixing Date less the Coupon(s) of 9.7500%^{**} paid out during the term of the Structured Product. If the Final Fixing Levels of all Underlyings trade at or above the Initial Fixing Level, redemption will be 100% of Denomination.

Additionally, the Coupon(s) will be paid out according to Coupon Payment Dates.

The table above is valid at maturity only and is by no means meant as a price indication for this Structured Product throughout its lifetime. The price of this Structured Product depends on additional risk factors between the Initial Fixing Date and the Final Fixing Date. The price quoted on the secondary market can therefore deviate substantially from the above table. It was assumed, that Activision Blizz.s was the worst performing Underlying. This selection is just a representative example of the possible alternatives.
